Federal Computer Security Program Managers’ Forum Meeting
Bethesda North Marriott Hotel and Conference Center
August 19th, 2014
Draft SP 800-157 – Derived PIV Credential for Mobile Devices

Scope:

– The Derived PIV Credential is an additional PIV Credential to satisfy HSPD-12’s ‘Common Identification‘ mandate
### Draft SP 800-157: Addressing a Gap for Remote Authentication with Mobile

**Yellow** font indicates the environments for the PIV Card Credentials and their authentication mechanisms.  
**Red** indicates the environments where the new Derived PIV credential’s “PKI Derived” authentication mechanism for Mobile Devices applies.
Draft SP 800-157 – Derived PIV Credential for Mobile Devices

Motivation:

– PIV Cards have been geared towards traditional computing platforms (laptop, desktop)
– For newer computing devices (mobile devices), the use of the PIV Card for e-authentication is challenging and requires bulky add-on readers

Goal: To provide alternative approaches to PIV-enabled e-authentication with mobile device - without PIV Card and add-on readers.
Goal (continued):

- While leveraging the PIV Infrastructure for:
  - Interoperability: Take advantage of the same PKI infrastructure
  - Cost-savings: Leverage the trust and identity-proofing performed for 5 million issued PIV cards via SP 800-63 concept of credential derivation
Mobile devices and their capabilities vary by:

- Mobile device manufacturers, platforms, ports, Mobile Network Operators and have capabilities that are often different in focus (e.g., tablet vs smart phone).

- One technical approach is not sufficient to cover the various mobile devices deployed by USG.

- Draft SP 800-157 is flexible and offers a spectrum of approaches to electronic authentication on mobile devices.
Integrated Security Tokens for Mobile Devices:
- Mobile Device Software tokens (current)
- MicroSD tokens (current)
- USB security tokens (near term)
- UICC tokens (near term)
- Embedded Hardware (near term)

Benefits:
- Derived PIV Credential - leverages identity proofing and vetting processes of PIV cardholder
- It’s integrated -> better user experience

Considerations:
- Provisioning and management of mobile device specific credential
- Limited mobile OS and application support (MicroSD, USB, UICC)
Draft SP 800-157 – Derived PIV Credential for Mobile Devices

SP 800-157 defines a Derived PIV Credentials for the Security Tokens:

- Define the Derived PIV Credential (a PKI-based credential)
- Both LoA-3 (software) and LoA-4 (hardware) Derived PIV Credential are possible
- Key size and algorithm options are the same as for the PIV Authentication private key
- Defines Derived PIV Credential Lifecycles:

Draft SP 800-157 also includes:

- How to include an optional Digital Signature Key and the Encryption Key in the Derived PIV Credential’s security token (Appendix A)
Draft SP 800-157 – Derived PIV Credential for Mobile Devices – Lifecycle Processes

Derivation & Initial issuance:
- Derivation of Derived PIV Credential is based on proof of possession of the PIV card
- Issuance of a LoA-4 credential is in person, while issuance of an LoA-3 allows for remote issuance

Maintenance (rekey and re-issuance):
- Remote rekey to a LoA-3 Derived PIV Credential token
- Remote rekey to a LoA-4 Derived PIV Credential token when rekeying to the same token
- Derived PIV Credential is unaffected by loss, theft or damage to the Subscriber’s PIV Card.

Termination:
- The subscriber is no longer eligible for a PIV Card or is no longer in need of a Derived PIV Credentials
- Subscriber does not need a Derived PIV Credential anymore
- If token can be collected, then zeroize the private key or destroying the token. Otherwise, revoke the PIV Derived Authentication certificate.
Draft SP 800-157 – Derived PIV Credential for Mobile Devices

Appendix C -- Derived PIV Credentials in Relation to OMB Memoranda

With integrated tokens, authentication factors are not provided by a separate token

“Future guidance will be made available by OMB to provide an alternative to the remote authentication policy in M-06-16 and M-07-16.”

Draft NIST IR 7981
Mobile, PIV, and Authentication

A Companion Document to Draft SP 800-157

- Analyzes different approaches to PIV-enable mobile devices
  - Includes the use of PIV Cards with mobile devices in addition to Derived PIV Credentials
- Points out benefits and considerations (pros/cons) for each approach
  - Example: UICC approach requires cooperation with MNO
- Approximates when these approach might become available
  - Categorized approaches in ‘current’ and ‘near term’ solutions
- Includes Recommendations
  - Hardware rooted solutions provide better security
  - Software solution are available now – NIST IR 7981 recommends complementing these by hardware-backed mechanism to protect the private key of the Derived PIV Credential when not in use (the hybrid solution)
  - In the longer-term, NIST IR recommends adoption of hardware-supported security mechanisms in mobile devices, such as the Roots of Trust (SP 800-164) to support stronger assurance of identity
What’s Next?

• Resolve public comments and produce final SP 800-157

• Draft SP 800-166 Derived PIV Credential Test Requirements for
  - Derived PIV Credential Data Model and Interface and
  - Portability: Removable security tokens ((USB, microSD, UICC) should be
    portable from one device to another.

• SP 800-79-2 Guidelines for the Accreditation of PIV Card Issuers and
  Derived PIV Credential Issuers (under development)
The Author Team (from A to Z)

Draft SP 800-157:
- Bill Burr (william.burr@nist.gov)
- David Cooper (david.cooper@nist.gov)
- Hildegard Ferraiolo (hildegard.ferraiolo@nist.gov)
- Salvatore Francomacaro (salfra@nist.gov)
- Sarbari Gupta (sarbari@electrosoft-inc.com)
- Jason Mohler (jmohler@electrosoft-inc.com)
- Andrew Regenscheid (andrew.regenscheid@nist.gov)

Draft NIST IR 7981:
- Bill Burr (william.burr@nist.gov)
- David Cooper (david.cooper@nist.gov)
- Hildegard Ferraiolo (hildegard.ferraiolo@nist.gov)
- Salvatore Francomacaro (salfra@nist.gov)
- Andrew Regenscheid (andrew.regenscheid@nist.gov)
