

The Healthcare Vertical Turns its Eyes on Security

The Impact of HIPAA and other legislation on Security Engineering

Goals of Session:

- Provide accurate general understanding of relevant healthcare legislation
- Provide specific understanding of:
 - Patient rights
 - Requirements for use, disclosure and authorizations for patient records

Topics Covered:

- History of Privacy and Security Regulations for Healthcare
- HIPAA and Administrative Simplification
- Relevant Regulations that Flow from HIPAA
- How this affects security engineering
- Compliance Issues
- Implications of Non-compliance

Instructors/Bios:

Lisa A. Gallagher is Senior Director, Healthcare Services Initiative, Exodus Security Services. She has over 15 years of experience in the engineering and security fields, and has recently managed pioneering efforts in conjunction with NIAP and a national health information technology consortium, to bring security assessment and evaluation techniques to bear on the issue of healthcare compliance certification and monitoring.

Dr. Lewis Lorton has over 18 years in health information activity with service as a researcher, CIO, director of a national health information technology consortium and consultant. He is active in health policy at the national level and maintains many contacts with senior officials in the important regulatory agencies. He has a long history in technology and technology policy. He has testified to Congress on privacy, security and technology.
