This DRAFT document has been approved as FINAL, and has been superseded by the following publication:

Publication Number: Special Publication 800-53 Revision 4

Title: Security and Privacy Controls for Federal Information

Systems and Organizations

Publication Date: 04/30/2013

• Final Publication: http://dx.doi.org/10.6028/NIST.SP.800-53r4

Related Information on CSRC:
 http://csrc.nist.gov/publications/PubsSPs.html#800-53

 Information on other NIST Computer Security Division publications and programs can be found at: http://csrc.nist.gov/

Unofficial Markup SP 800-53, Revision 4, Appendix D

This document provides an unofficial markup comparing SP 800-53, Revision 4, Appendix D (Final Public Draft) to the Initial Public Draft of Revision 4. Upon final publication of SP 800-53, Revision 4 in April 2013, NIST will publish a final markup of Appendix D providing changes from Revision 3 to Revision 4. Organizations should refer to SP 800-53, Revision 4 (clean copy) as the official source publication in situations where there are inconsistencies or discrepancies noted in the markup version

APPENDIX D

SECURITY CONTROL BASELINES - SUMMARY

LOW-IMPACT, MODERATE-IMPACT, AND HIGH-IMPACT INFORMATION SYSTEMS

his appendix contains the security control baselines that represent the *starting point* in determining the security controls for low-impact, moderate-impact, and high-impact information systems. The three security control baselines are hierarchical in nature with regard to the security controls employed in those baselines. If a security control is selected for one of the baselines, the family identifier and control number are listed in the appropriate column. If a security control is not used in a particular baseline, the entry is marked *not selected*. Security control enhancements, when used to supplement security controls, are indicated by the number of the enhancement. For example, an IR-2 (1) in the high baseline entry for the IR-2 security control indicates that the second control from the Incident Response family has been selected along with control enhancement (1). Some security controls and enhancements in the security control catalog are not used in any of the baselines in this appendix but are available for use by organizations if needed. This situation occurs, for example, when the results of a risk assessment indicate the need for additional security controls or control enhancements in order to adequately mitigate risk to organizational operations and assets, individuals, other organizations, and the Nation.

Organizations can use the recommended *priority code* designation associated with each security control in the baselines to assist in making sequencing decisions for control implementation (i.e., a Priority Code 1 [P1] control has a higher priority for implementation than a Priority Code 2 [P2] control; a Priority Code 2 [P2] control has a higher priority for implementation than a Priority Code 3 [P3] control, and a Priority Code 0 [P0] indicates the security control is not selected in any baseline). This recommended sequencing prioritization helps ensure that security controls upon which other controls depend are implemented first, thus enabling organizations to deploy controls in a more structured and timely manner in accordance with available resources. The implementation of security controls by sequence priority code does not imply any defined level of risk mitigation until *all* controls in the security plan have been implemented. The priority codes are used only for implementation sequencing, not for making security control selection decisions. Table D-1 summarizes sequence priority codes for the baseline security controls in Table D-2.

TABLE D-1: SECURITY CONTROL PRIORITIZATION CODES

Priority Code	Sequencing	Action
Priority Code 1 (P1)	FIRST	Implement P1 security controls first.
Priority Code 2 (P2)	NEXT	Implement P2 security controls after implementation of P1 controls.
Priority Code 3 (P3)	LAST	Implement P3 security controls after implementation of P1 and P2 controls.

¹ A complete description of all security controls is provided in Appendices F and G. In addition, separate documents for individual security control baselines (listed as Annexes 1, 2, and 3) are available at http://csrc.nist.gov/publications. An online version of the catalog of security controls is also available at http://web.nvd.nist.gov/view/800-53/home.

APPENDIX D PAGE D-1

Deleted:).

² The hierarchical nature applies to the security requirements of each control (i.e., the base control plus all of its enhancements) at the low-impact, moderate-impact, and high-impact level in that the control requirements at a particular impact level (e.g., CP-4 Contingency Plan Testing—Moderate: CP-4 (1)) meets a stronger set of security requirements for that control than the next lower impact level of the same control (e.g., CP-4 Contingency Plan Testing—Low: CP-4).

Unspecified Priority Code (P0) NONE Security control not selected in any baseline. Deleted: for

Table D-2 provides a summary of the security controls and control enhancements from Appendix F that have been allocated to the initial security control baselines (i.e., low, moderate, and high). The sequence priority codes for security control implementation and those security controls that have been withdrawn from Appendix F are also indicated in Table D-2. In addition to Table D-2, the sequence priority codes and security control baselines are annotated in a priority and baseline allocation summary section below each security control in Appendix F.

³ The security control baselines in Table D-2 are the initial baselines selected by organizations prior to conducting the tailoring activities described in Section 3.2. The control baselines and priority codes are only applicable to non-national security systems. Security control baselines for national security systems are included in CNSS Instruction 1253.

Deleted:)

Deleted: all

Deleted: by

Deleted: to

Deleted: : (ii)

Deleted: iii)

Tables D-3 through D-19 provide a more detailed summary of the security controls and control enhancements in Appendix F. Each table focuses on a different security control family. Whereas Table D-2 includes only those security controls and control enhancements allocated to the three security control baselines. Tables D-3 through D-19 include all controls and enhancements for the respective security control families. The tables include the following information: (i) the security controls and control enhancements have been selected for each of the security control baselines; ⁴ (ii) the security controls and control enhancements have not been selected for any security control baseline (i.e., the controls and enhancements available for selection to achieve greater protection); (iii) the security controls and control enhancements that have been withdrawn from Appendix F; and (iv) the security controls and control enhancements that have assurance-related characteristics or properties (i.e., assurance-related controls). Assurance-related controls are discussed in greater detail in Appendix E to include the allocation of such controls to security control baselines (see Tables E-1 through E-3).

ADJUSTMENTS TO SECURITY CONTROL BASELINES

ALLOCATION OF SECURITY CONTROLS AND ASSIGNMENT OF PRIORITY SEQUENCING CODES

With each revision to SP 800-53, minor adjustments may occur with the security control baselines including, for example, allocating additional controls and/or control enhancements, eliminating selected controls/enhancements, and changing sequencing priority codes (P-codes). These changes reflect: (i) the ongoing receipt and analysis of threat information; (ii) the periodic reexamination of the initial assumptions that generated the security control baselines; (iii) the desire for common security control baseline starting points for national security and non national security systems to achieve community-wide convergence (relying subsequently on specific overlays to describe any adjustments from the common starting points); and (iv) the periodic reassessment of priority codes to appropriately balance the workload of security control implementation. Over time, as the security control catalog expands to address the continuing challenges from a dynamic and growing threat space that is increasingly sophisticated, organizations will come to rely to a much greater degree on overlays to provide the needed specialization for their security plans.
