Supply Chain Risk Assessments (SCRA)
on a Budget

Agenda

- Introduction

- Defining the "No"

- Cost-Effective Methodologies

- Leveraging Publicly Available Information

- The Power of Collaboration

- Automation

The expanding digital landscape has exponentially magnified the complexities of supply chains, introducing a myriad of cybersecurity threats and vulnerabilities.

Organizations looking to implement or mature their Cybersecurity Supply Chain Risk Management (CSCRM) programs often operate under the assumption that a comprehensive Supply Chain Risk Assessment (SCRA) necessitates heavy automation and an exhaustive understanding of every supplier detail.

While automation and in-depth knowledge can indeed enhance the precision of SCRA, they are not absolute prerequisites, especially for organizations operating on limited resources.

Defining the "No"

Cost-Effective Methodologies
