My attached comments are actually serious questions about applying your policies/requirements to a very small business. We respect and understand the importance of your effort and want to be compliant as much as physically possible given the parameters we have to work with.

Thanks,
Dwayne

1	Dwayne/Planet Works	General	analysis			If a small company does not have a network i.e. has a PC or maybe two on home network, is it considered compliant on all network requirements since the requirements do not allow response of NA?	
						Same question as above except for many other components such as routers and other devices most small businesses do not have?
